QUESTION 1

A technician is trying to setup a non-domain user account on a workstation, but receives the following error message "Password does not meet the complexity requirements." Which of the following utilities should the technician use to identify the criteria?

- A. Local Security Policy
- B. Users and Groups
- C. Performance Monitor
- D. MSCONFIG

Correct Answer: A

Reference: <http://www.tomshardware.com/forum/23713-63-password-meet-password-policy-requirements>

QUESTION 2

A technician is tasked with resolving a display issue with a laptop. The technician has determined that the laptop's display needs to be replaced. Which of the following is the NEXT step the technician should perform?

- A. Identify the problem that caused the display to fail.
- B. Establish a theory of the probable cause.
- C. Verify full system functionality and implement preventive measures.
- D. Establish an action plan to resolve the problem.

Correct Answer: D

QUESTION 3

Which of the following security threats requires the attacker to be physically located near the target machine?

- A. Shoulder surfing
- B. Social engineering
- C. Phishing
- D. Rootkit

Correct Answer: A

Reference: <http://www.lifelock.com/education/id-theft-types/shoulder-surfing/>

QUESTION 4

A PC is powering on but the only activity a technician can see is spinning fans. Which of the following components would MOST likely be at fault for such a condition? (Select TWO).

- A. SATA controller
- B. CPU
- C. Memory
- D. Hard drive
- E. Sound card

Correct Answer: BC

QUESTION 5

A virtual machine running locally would be BEST utilized in which of the following situations?

- A. On a PC with minimal RAM
- B. Patch testing before rollout
- C. Thick client configuration
- D. Gaming workstation configuration

Correct Answer: B

The best way to utilize a virtual machine is to test patches before deploying it on the live machine. Patches tend to corrupt operating systems. So it is better to check them first on a virtual machine before deploying it on a live machine.

QUESTION 6

A technician is called in to look at a computer that was infected with a rootkit. The technician determines the infection cannot be cleaned. The technician needs to reinstall the computer's OS. Which of the following types of installs would be the BEST in this situation?"
